# A Message from the Executive Sponsor

Thank you for your interest in the BeiGene Global Regulatory Affairs PharmD Fellowship. At BeiGene, we truly believe that cancer has no borders, and neither should we. Our diligence to provide transformational medicines to improve the ways cancer can be confronted, with ambitious strategies to focus on global access, is distinctive from other organizations putting patients everywhere at the forefront of our minds exemplifying one of our core values. We believe our scientific advances in medicine evidenced by our innovative pipeline along with our diverse, cross-cultural, and knowledgeable colleagues provide unique opportunities for prospective talent. With a distinctive portfolio and pipeline of therapies expanding across solid tumor, hematology oncology, and immunology and inflammation, BeiGene is an emerging pharmaceutical industry leader.

As a pharmacist, when creating this fellowship, it was my goal to create a program that utilizes and builds upon the skillset students gain during the PharmD curriculum. The BeiGene Regulatory Affairs PharmD Fellowship is designed to provide PharmD graduates with an array of learning experiences, obtained through a holistic program, where strong expertise can be achieved while working cross-functionally throughout the organization. With experienced mentors serving as preceptors, our priority is developing our fellows' skills and capabilities to succeed in the industry. We look forward to sharing our commitment to fellow development and building the future pipeline of regulatory professionals.

Our best wishes are with you as you embark on this next phase of your career!

# About BeiGene

At BeiGene, we say, "Cancer has no borders. Neither do we." BeiGene was founded in 2010 to bring the most impactful medicines to the greatest number of patients possible.

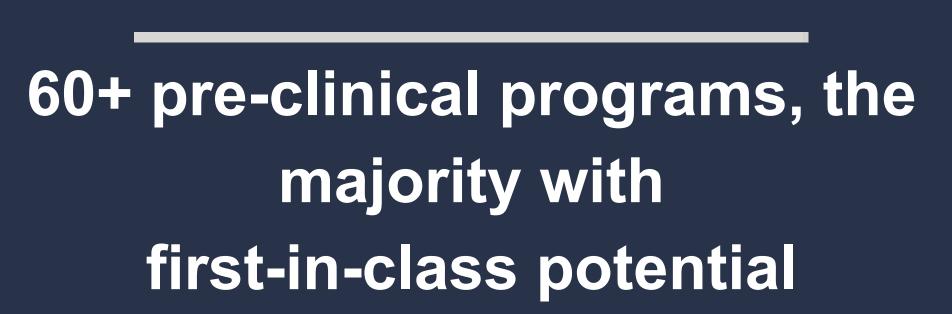

We seek to accomplish this goal in the following ways:

- Spearheading a new model for the biotech industry;
- Investing in science with a focus on great patient impact; and
- Broadening patient access to innovative medicines.
